Towering – Powering – Energising – Innovating

TAN SRI A K NATHAN

Moving To New Frontiers

The history of Eversendai goes back to 1984 and after three decades of unparalleled experience, technical expertise and a strong network across various countries, Eversendai is recognised as a leading global organisation in undertaking turnkey contracts; delivering projects for high rise buildings, power plants, Oil & Gas upstream and downstream including process and industrial plants as well as infrastructure and composite structures in the Asian and Middle Eastern regions.

We have a dedicated workforce of over 10,000 people and an impressive portfolio of more than 300 accomplished projects in over 14 different countries with 7 fabrication facilities located in Malaysia, Dubai, Sharjah, Ras Al Khaimah, Qatar, India and Thailand with an annual capacity of over 222,000 metric tonnes. With our state-of-the-art steel fabrication factories, we have constructed some of the world's most iconic landmark structures. These include the Burj Khalifa in Dubai, Petronas Tower 2 in Malaysia, Khalifa Olympic Stadium in Qatar, Kingdom Centre in Saudi Arabia and Republic Plaza in Singapore.

Our expansion plans, including our foray into the engineering, construction, procurement, fabrication and installation services for the Oil & Gas industry which is very much integral to our core operations, will also see us venture into new markets. Today, we have the capability of handling total integrated multi-disciplinary construction packages involving all phases of construction work which include civil and building, structural and steel fabrication and erection, mechanical piping, tankage, process equipment erection and electrical and instrumentation works.

As we move to new frontiers, we will be able to provide our clients the certainty and comfort of knowing that their projects are in capable and experienced hands. These developments will complement our vision, mission and core values. This will simultaneously allow us to remain one of the most successful organisations in the Asian and Middle Eastern regions and beyond with corresponding efficiency and reliability.

The successful and timely completion of our projects accompanied by soaring innovation, creativity and our aspiration to move to new frontiers have been the key drivers for achieving continuous growth through the years. We remain committed to these values and we believe, this stamps our firm intent to dominate the various industries which we are involved in and also marks the next phase in our development to be amongst the undisputed global market leaders.

Our strength lies in our resilient workforce whose skills, commitment and dedication serve the needs of our clients. An established management which overlooks the areas of planning, procurement, HSE and execution, combined with experienced managers, engineers alongside our workforce has made Eversendai a leading and innovative global organisation.

We are pleased to realise our aspirations of growing our business and we shall continually seek opportunities to globally expand our existing scope of operations.

This is just the beginning

ENGINEERING

Structural, Connection Design & Shop Drawing

Eversendai Corporation's Offices in India, Dubai and Qatar provide technical services for all types of structures: -

- We are equipped with state of the art design and detailing software, with 3D modeling capabilities for structural design, connection design, temporary erection engineering for high-rise, industrial buildings & equipment support structures, shopping malls, convention centers and infrastructure projects.
- Shop drawings for structural steel and rebar engineering.
- Value engineering for member sizing, connections and innovative erection methodologies tailored to meet the project and the clients' requirements.
- Complete 3 Dimensional model of structures and connections, exporting the nested cutting plans to various CNC machines directly using 3D model software to ensure accuracy in fabrication and erection of myriad of bolted joints.
- Structural steel erection engineering determining centre of gravity for intricate assemblies to assist in complex heavy lifts including in some of the tallest structures.
- Temporary structures as part of the model to eliminate fouling of members and cables during site assembly and erection.
- Complete material list, bolt list, stud bolt list extracted from model in advance for early and bulk procurement and effective site management.

Eversendai is equipped with software such as STAADPRO, ETABS, FASTRAK, DESCON and ROBOT for Structural Design and custom made spread sheets for Connections and TEKLA STRUCTURES, BOCAD, REVIT, RC-CAD and ACAD for Structural Steel and Rebar Detailing.

We carry out our own Research and Development, seeking new methodologies to improve deliverables, work processes, automation and procedures to enhance the engineering and fabrication drawing output using cutting edge 3D model technology.

Eversendai has a team of experienced design engineers and detailing personnel including experienced 3D structural model creators and checkers.

The majority of the projects for design and detailing conform to British, EURO Standards and American Standards and our experienced team of people have

versatility in addition to the standards from UBC, IBC, JIS, Canada, Australia, Europe and India.

We have the expertise to deal with pipe profile structures, unfolding drawings with 3D Uni-Planar and Multi planar joints.

Eversendai has been awarded with prestigious awards, such as the Golden Award as well as many Global BIM Awards for Best and Complex Models from Tekla Structures for various projects.

We provide electronic communications with a dedicated 24 hours, 7 days a week FTP server with high speed internet connections and voice over internet protocol (VOIP) and WebEx services across the different regions. Our engineering capability with almost three decades of experience in our chosen field of products and services ensure that our clients and customers are offered one-stop shop service to meet their varying needs.

FABRICATION FACILITIES

In keeping with Eversendai Corporation's objective to enhance its premier position in the business through engineering excellence and specialist construction services, the company has further developed its fabrication capacity to accommodate Eversendai's growing number of projects, boasting a combined annual fabrication capacity of over 150,000 metric tonnes.

Eversendai produces high quality fabricated structures and has the accreditation and certification from ASME Boiler and Pressure Code U, U2, S and the R Symbol from the National Board of Boilers and Pressure Vessel Inspectors, for our facility at Hamriyah Free Zone, Sharjah, U.A.E .

All our fabrication factories are strategically located and have the capability and the capacity to fabricate and export high quality fabricated structures to any parts of the world on time.

Eversendai Corporation has fabrication factories at: -

All our fabrication facilities are certified with global standards and fabrication works are being carried out in accordance with the internationally recognized ISO 9001-2008 OHSAS 18001-2007 and ISO 14001-2004 standards under an Integrated Management System to maintain the highest global standards for Quality, Health & Safety and Environmental Management systems.

The factories are equipped with the latest state-of-the-art CNC (Computer Numerical Controlled) machines which enable production of premium quality steelwork components by facilitating quality material preparation activities with optimum usage of time and materials and with high accuracy by avoiding all possible human errors, for the subsequent assembly and welding activities as part of the fabrication process.

We are also equipped with all the required precise CNC machinery and highly skilled personnel to face any kind of challenges in the fabrication of complex structures in order to turn the architect's dreams into reality. This has been acknowledged by many renowned architects /designers throughout the world and we have been provided with many opportunities to get involved in iconic projects in the Middle East as well as in other parts of world where we serve various clients.

In order to meet complex requirements of developing a 2D concept into a 3D real time model, we adopt precise fabrication methods and quality standards to incorporate the required free hand curves/bends drawn by the architects onto the steel components.

In this process, we use highly precise total stations to co-ordinate each and every structural component being placed in multiple planes, as extracted from the 3D real time models, and maintain the architectural intent by deploying highly précised CNC machinery as well as an experienced workforce and supervisory staff. The efforts being extended to make the control assemblies wherever required, on the shop floor itself, eliminates all kinds of mismatches as well as related time losses to attend to any mismatches on site.

Our ability to convert concepts such as the rose bud in Rose Tower in Dubai, the complex wave form roof structures at Dubai Mall, the air craft shape at the New Doha International Airport (NDIA), desert flower at Qatar National Museum, and leaning tower at Capital gate at Abu Dhabi shows our strength to meet any kind of complex requirements.

The operator of our machines shall receive the NC data generated from the 3D TEKLA detailing software directly from the engineering office.

The details of the various high precise CNC machinery set up at our factories are as follows:

Plate Cutting Machine

CNC Controlled Plate cutting/profiling machine supplied by SATO Cutting Systems, Germany, has the capability to process plates up to 24m long x 5m wide of 200 mm thick (max) by using oxy/acetylene or plasma cutting facilities.

Plate Punching, Drilling & Cutting Machine

The plate processing machine supplied by Peddinghaus, U.S.A, has the ability to punch, drill, mark and cut plates using plasma or oxy/acetylene of thickness up to 75 mm.

Saw, Drill & Notching Line

This heavy duty saw and drill supplied by Kaltenbach, Germany has the ability to cut sections of width 1340mm and height 730mm, capable of sawing at variable metering and automatic drilling with three axis drill facility up to a dia of 40 mm. The coping machine which is part of the setup is capable of coping and cutting the sections, angles, channels, tubes and hollow sections using its 6 axis robotic arm mounted with plasma and or oxy/acetylene cutting torch options.

Tube Profiling Machines

The pipe profiling machine supplied by Muller Opladen, Germany is a six axis CNC controlled machine utilizing plasma or oxy/acetylene for cutting the profiles on hallow sections. The machine has the ability to make profiles on pipes and square hallow sections with/without weld bevels.

Plate Rolling Machine

This is the most advanced “Roll by wire” technology based full hydraulic variable axis plate bending machine with a maximum capacity of 2200 MT. It is capable of rolling a maximum of 170 mm in plate thickness and 3000 mm in plate width along with the optional cone rolling facility.

Bending Machine

Eversendai has got one of the world's largest section bending machine. This machine is capable of rolling all kinds of I sections & channels (on both axis) and pipes etc. Its operating range includes a maximum of 800mm diameter in pipes and 1000mm depth in sections.

Gantry Welder

Heavy built-up requirements shall be carried out by using the automatic SAW Gantry Welding machine to build “H” beams, “I” beams and other hollow sections like rectangle and square box sections. This machine has been provided with two arms and accordingly two built-up sections can be welded simultaneously.

Surface Treatment Equipment

The shops are provided with dedicated auto blasting machines with openings – 1500mm width x 200m height and 1200mm width x 1200mm height and manual blasting chambers (5m x 5m x 14m) to cater the needs for the blast cleaning of the steelwork prior to application of project specific paint systems.
